Disposable Electrocoagulation Cutter is a medical device used in conjunction with high-frequency surgical equipment. It achieves the cutting and coagulation functions of biological tissues through the high-frequency and high-voltage current generated by the electrode tip. Its working principle is: high-frequency current evaporates the water in the tissue and ruptures the cells to complete the cutting, while promoting protein coagulation and sealing the blood vessels to achieve hemostasis. The device is designed for single use to avoid cross infection, ensure medical safety, and reduce the risk of performance degradation due to repeated disinfection.

The global Disposable Electrocoagulation Cutter market size was estimated at USD 133.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
