Abstracts

Disposable enteral stents are medical devices used to treat obstructions in the gastrointestinal tract, including the esophagus, stomach, or intestines. These stents are typically made of biocompatible materials such as plastic or metal and are designed to provide a temporary solution for patients with conditions like cancer, strictures, or benign blockages. The primary purpose of an enteral stent is to restore the flow of food and liquids through the digestive system, improving the patient's ability to eat and digest. The growing prevalence of gastrointestinal diseases, such as cancer, Crohn's disease, and strictures, is one of the primary drivers for the disposable enteral stents market. As more patients require palliative care or minimally invasive treatments, the demand for temporary solutions like enteral stents continues to rise. Disposable enteral stents are particularly beneficial for elderly patients or those who are not candidates for surgery, offering a less invasive, cost-effective alternative for managing obstructive gastrointestinal conditions. Additionally, advancements in stent materials and design have improved their safety, effectiveness, and ease of use, further boosting their adoption across healthcare settings. The key challenges in the disposable enteral stents market is the relatively high cost compared to traditional stents, which may limit their use in resource-constrained settings. While these devices offer the advantage of being single-use and reducing the risk of infection, their higher price point can pose a financial burden for both healthcare providers and patients, particularly in developing countries. Moreover, the market faces regulatory hurdles and the need for continuous innovation in stent technology to improve their durability, ease of deployment, and biocompatibility, which can be costly and time-consuming for manufacturers. North America and Europe occupy the main markets. The North American market has changed rapidly in the past few years, accounting for about 52% of the world in 2023, and it is expected to reach 50% in 2030. Among them, Boston Scientific is the leading company in intestinal stents, and the main manufacturer in China is Nanwei Medical. With the support of policies and

the improvement of the quality of domestic products, domestic products are gradually seizing the Chinese market with their advantages in quality, after-sales service, and cost-effectiveness, and continuously replacing imports.

The global Disposable Enteral Stents market size was estimated at USD 143.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
