Report Overview

A disposable laryngoscope is a medical device that is used to examine the larynx (voice box) and facilitate endotracheal intubation (insertion of a tube into the windpipe). It consists of a handle, a blade, and a light source. Unlike reusable laryngoscopes, disposable laryngoscopes are designed to be used only once and then discarded, reducing the risk of cross-contamination and infection. Disposable laryngoscopes may also have additional features such as video cameras, LED lights, or fiber optics to enhance visualization and performance.

The global Disposable Laryngoscope Slice market size was estimated at USD 340.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
