Abstracts

Disposable non-absorbable ligating clips are medical devices used during surgical procedures to ligate (close off) blood vessels or other tubular structures. Made from biocompatible materials such as polymer or metal, these clips provide a secure and efficient way to control bleeding or prevent fluid leakage without the need for sutures. Unlike absorbable clips, these are designed to remain in the body indefinitely unless removed, making them suitable for long-term applications. Their disposable nature ensures sterility and reduces the risk of cross-contamination, making them widely used in minimally invasive and open surgeries.

The global Disposable Non-absorbable Ligating Clips market size was estimated at USD 1425.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
