Abstracts

Disposable oral care devices are single-use dental hygiene products designed for temporary or on-the-go use, typically including items such as disposable toothbrushes (often pre-pasted), floss picks, interdental brushes, and tongue cleaners. These products are engineered for convenience, portability, and hygiene, eliminating the need for cleaning or maintenance while reducing the risk of bacterial contamination associated with reusable alternatives. They cater to diverse usage scenarios such as travel, post-meal freshening, emergency use, or healthcare settings where sterility and convenience are prioritized. Materials commonly used include biodegradable plastics, bamboo, or other eco-friendly alternatives in response to growing environmental concerns, though traditional plastics remain prevalent in many mass-market options. The core value proposition centers on accessibility, ease of use, and assurance of cleanliness without the burden of upkeep.

The global Disposable Oral Care Device market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
