Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Disposable Pathology Blades competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of disposable pathology blades will reach 337.5 million pieces, with an average selling price of US\$13 per piece. Disposable pathology blades are high-precision tools specifically used for pathology examination and research, designed for making tissue sections under a microscope. This blade is usually made of high-quality stainless steel or carbon steel and undergoes strict process processing to ensure its sharpness and consistency, so that extremely fine and flat tissue samples can be obtained during the sectioning process. The main advantage of disposable pathology blades is that they are discarded after one use, avoiding the risk of cross-infection and cumbersome disinfection process caused by traditional reusable blades, and improving the safety and efficiency of operations. The overall industry chain of disposable pathology blades is relatively streamlined. The upstream is mainly suppliers of raw materials such as high-quality stainless steel, cemented carbide, and coating chemicals, such as Sandvik and Nippon Steel, which provide precision steel, and Daido Steel and BASF, which provide special alloys and functional coating materials; the midstream is blade manufacturers, typical companies include Feather, Leica Biosystems, Sakura Finetek, etc., which are responsible for precision forming, edge processing and sterile packaging; the downstream is mainly end users such as hospital pathology departments, third-party medical testing laboratories, and scientific research institutions, such as Mayo Clinic, Labcorp, etc., which complete tissue sectioning and pathology analysis by using these blades in batches on automatic slicers.

The global Disposable Pathology Blades market size was estimated at USD 3555.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
