## Abstracts

Disposable pulse oximeter sensors are single-use devices designed to measure blood oxygen saturation (SpO<sub>2</sub>) levels and heart rate. Typically used in clinical settings, these sensors are attached to the patient's finger, toe, or earlobe, where they non-invasively monitor respiratory and circulatory health. The sensor works by emitting light through the skin, detecting variations in light absorption caused by oxygenated and deoxygenated blood. Disposable pulse oximeter sensors are crucial for infection control and hygiene, as they eliminate the risk of cross-contamination between patients. Their affordability and convenience make them a popular choice for short-term or one-time monitoring.

The global Disposable Pulse Oximeters Sensor market size was estimated at USD 51.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
