Abstracts

Disposable resuscitation bags, also known as manual resuscitators or bag valve masks (BVMs), are single-use medical devices designed to provide positive pressure ventilation to patients who are not breathing or are breathing inadequately. These devices consist of a self-inflating bag, a non-rebreathing valve, and a face mask, allowing healthcare providers to manually deliver breaths by squeezing the bag. They are essential in emergency medicine, intensive care, anesthesia, and pre-hospital settings, offering a critical intervention for respiratory failure, cardiac arrest, or during procedures requiring temporary ventilatory support. Their disposable nature reduces the risk of cross-contamination and infection transmission, making them a standard tool in infection control protocols within healthcare facilities.

The global Disposable Resuscitation Bag market size was estimated at USD 450.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.75% during the forecast period.
