Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Disposable RF Plasma Cutter Head competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Disposable radiofrequency plasma cutting tips are disposable high-frequency electrode consumables used in low-temperature plasma surgical systems. They generate a low-temperature (40-70°C) plasma layer in a saline environment using radiofrequency current output from the main unit. Charged particles break tissue molecular bonds, achieving precise cutting, ablation, and hemostasis. These tips are widely used in minimally invasive surgeries such as thyroid, tonsil, nasal turbinate, intervertebral disc, and arthroscopic procedures. The upstream of the industry chain includes suppliers of medical polymer insulating materials (such as PEEK and PTFE), precision metal guide wires (nickel-titanium/stainless steel), radiofrequency connectors, and micro-injection molding and laser welding equipment. The midstream consists of professional manufacturers with Class II medical device registration certificates, who must master electrode impedance control, thermal management, biocompatibility verification, and ethylene oxide sterilization capabilities. The downstream primarily targets clinical departments such as otolaryngology, general surgery, and orthopedics, entering hospitals through distributors, direct sales, or provincial centralized procurement of consumables. As of 2025, the average end-user price of domestically produced disposable radiofrequency plasma cutting heads was \$1,800-3,500 per unit, while imported or high-end customized models reached \$4,500-6,800 per unit. In specialized consumable procurement campaigns conducted in multiple provinces, the winning bid price has generally dropped to \$1,200-2,600 per unit. In 2024, the global production of disposable radiofrequency plasma cutting heads was approximately 2,280,000 units, with an average price of approximately US\$250 per unit. Major

companies in the industry have gross profit margins between 35% and 50%, with single-line production capacities of 50,000-80,000 units per year.

The global Disposable RF Plasma Cutter Head market size was estimated at USD 570.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
