Report Overview:

The dissolvable metal frac plug operates like a traditional frac plug and can be set anywhere in the wellbore to isolate individual zones. The dissolvable frac plug is composed of a high-strength metal that degrades completely in wellbore fluids.

The dissolvable frac plug is designed for plug-and-perf applications and is composed of a new high-strength engineered metal that dissolves in water-based wellbore fluid, formation fluid, or production fluid. Complete dissolution of the frac plug eliminates the need for a separate mill run intervention into the wellbore, which helps reduce costs, operation time, and risks to personnel.

Dissolvable frac plugs are generally in the range from 4.5 to 6 inches in diameter and 8 to 20 inches in length. A single wellbore requires 10 to 40 multi-part frac plugs to pressurize and perforate multiple oil and gas producing layers, also known as stages. Hydraulic fracturing, also known as fracking, hydrofracking, or hydrofracturing, is a stimulation technique for wells used for oil and gas production from tight reservoirs. In this process, the rock is fractured by a pressurized liquid. A fracking fluid is injected in the well at high pressure, which creates cracks in deep-rock formations. Through these cracks, natural gas, petroleum, and brine can flow more freely. In order to improve the overall productivity of hydraulic fracturing and attain better hydrocarbon flow, well completion techniques, such as plug and perf, are most commonly utilized. In this process, a bridge plug and perforation (perf) gun is placed at the desired stage in a well bore. Frac plugs are used as a temporary barrier to separate stages of zones during the fracturing or stimulation process. When the plug is set and the zone is perforated, a ball is pumped down to isolate the zones below the plugs. Ball-activated plugs deviate

fracture fluids through perforations into the formation. After completion of all stages, the process is repeated. The development of soluble bridge plug market benefit from the development of unconventional oil and gas wells, especially shale gas wells.

The Global Dissolvable Metal Frac Plugs Market Size was estimated at USD 389.52 million in 2023 and is projected to reach USD 656.88 million by 2029, exhibiting a CAGR of 9.10% during the forecast period.
