## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dissolvable Punctal Plugs competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Dissolvable punctal plugs are small, biocompatible, and biodegradable medical devices designed for temporary insertion into the puncta (tear duct openings) of the eye. Their primary purpose is to block tear drainage through the nasolacrimal system, thereby increasing tear film retention on the ocular surface to relieve symptoms of dry eye syndrome. These plugs dissolve naturally over time and do not require surgical removal. In the global ophthalmic treatment landscape, dissolvable punctal plugs have emerged as an innovative, minimally invasive solution for patients suffering from dry eye disease. Their unique biodegradable properties and high patient compliance are driving sustained market demand worldwide, with North America standing out as the leading consumer region. Dry eye disease has become a significant health concern globally, affecting individuals' quality of life. Factors such as lifestyle changes, environmental influences, and an aging population have contributed to the rising incidence of this condition. Traditional treatments often require patients to use artificial tears or rely on medications long-term. In contrast, dissolvable punctal plugs offer a more convenient and comfortable alternative. The primary advantage of dissolvable punctal plugs lies in their biodegradability. Unlike permanent plugs, these devices gradually dissolve within the eye, eliminating the need for surgical removal and significantly reducing patient treatment burden. Additionally, their minimally invasive nature ensures that patients experience less discomfort during treatment, enhancing the overall therapeutic experience.

The global Dissolvable Punctal Plugs market size was estimated at USD 86.7 million in
