Report Overview

Dissolved airfloatation is an operational process for thickening and clarification applications in water and wastewater treatment through the use of microscopic air bubbles as a driving force. Dissolved air floatation units are widely used in food processing applications, which tend to have water high in oil, fat, and grease content. There are mainly two types of dissolved airfloatation units, namely open tank DAF and plate pack DAF. Among these two, open tank DAFs are ideal for the treatment of wastewater, which is heavily loaded with solids. Plate pack DAFs are suited for low solid loading and high hydraulic rates.

The global Dissolved Airfloatation Unit market size was estimated at USD 385.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.15% during the forecast period.
