Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dissolving Cellulose competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Dissolving Cellulose production reached approximately 7.56 million tons, with an average global market price of around US\$ 949 per ton. Dissolving cellulose, also called as dissolving pulp (DWP), is a purified form of cellulose extracted from wood. It is used primarily in the production of various cellulose derivatives such as rayon, lyocell, acetate, ethers, and microcrystalline cellulose (MCC). **Market Drivers** Sustainable and Biodegradable Products As consumers and regulatory bodies push for more sustainable and eco-friendly products, the demand for biodegradable materials has increased. DWP is used to produce a variety of bio-based products, such as rayon, cellophane, and other biopolymers. This has led to a growing market for DWP. **Expansion into New Markets** The traditional markets for DWP, such as textile and cigarette filters, are maturing. However, there is a trend of exploring new applications for DWP, including in the production of biocomposites, pharmaceuticals, and specialty papers. **Geographical Shifts** There is a noticeable shift in the geographic distribution of DWP production. While traditionally dominated by regions like North America and Europe, there is a growing presence of DWP production in Asia, particularly in China, India, and Indonesia, due to the availability of abundant raw materials and lower labor costs.

The global Dissolving Cellulose market size was estimated at USD 7180.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
