Report Overview

Dissolving pulp is a specialized type of cellulose fiber derived from wood, specifically produced for the manufacturing of various textile and industrial products. It is characterized by its high purity and alpha-cellulose content, which allows it to dissolve in chemical solutions, such as copper ammonia or sodium hydroxide. Dissolving pulp is primarily used in the production of rayon, acetate, and triacetate fibers, as well as in the creation of cellulose derivatives like cellophane, cellulose acetate, and cellulose ethers. These derivatives are utilized in a wide range of applications, including textiles, films, coatings, pharmaceuticals, and household products. The production process of dissolving pulp involves chemical or mechanical treatments that separate the cellulose fibers from the wood, resulting in a high-quality, consistent material that is essential for many industries.
