Abstracts

Distilled cut palm stearin is a refined derivative of palm stearin, which itself is the solid fraction obtained during the fractionation of palm oil; through a molecular distillation process, it is further purified to remove free fatty acids, moisture, odor, and impurities, resulting in a high-purity, hard, and stable fat with a sharp melting point, widely used in food applications (such as in confectionery, margarines, and bakery fats for its consistency and shelf stability), as well as in oleochemical production (for soaps, cosmetics, and industrial uses) due to its consistent fatty acid profile and enhanced oxidative stability.

The global Distilled Cut Palm Stearin market size was estimated at USD 1920.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
