Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Distilled Tall Oil (DTO) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Distilled tall oil is a by-product of pine pulping and papermaking industry, which is purified by vacuum distillation of crude tall oil. Market Concentration and Key Players: Internationally, the market concentration of distilled tall oil is relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, Kraton Corporation, Ingevity and other large manufacturers; from the domestic point of view, distilled tall oil still has a lot of room for development. Manufacturing Processes and Market Trends: The process of making distilled tall oil begins with crude tall oil, a byproduct of pine pulping. In the kraft pulping process, pine wood chips are cooked by sodium hydroxide and sodium sulfide at high temperature, and fatty acids and resin acids in wood are saponified into sodium salts, forming black waste liquor. The upper oil was separated by acidification treatment, and then purified by multi-stage vacuum distillation, finally DTO was obtained. Its core components include tall oil fatty acids, resin acids and a small amount of asphalt. Advanced processes such as three-stage separation can improve the purity of components. At present, there are three major trends in the DTO market: bio-based transformation, expansion of high value-added applications and regional demand differentiation. It is mainly driven by the demand for biofuels, environmentally friendly coatings and new energy materials. DTO can be converted into fatty acid methyl ester with excellent low temperature fluidity by hydrotreatment, which can be used for renewable diesel oil; after rosin acid modification, it can replace petroleum-based raw materials, such as plant-based epoxy resin developed by Ingevity, and improve flexibility. China market growth is strong, paper industry accounts for a large proportion

of demand, but high-end products still rely on imports. The EU and North America dominate global supply, while China relies on policy support to accelerate capacity upgrading. Technological innovation drives sustainable development in the industry, such as closed-loop production systems that achieve 100% by-product utilization and a lower carbon footprint than petroleum-based products. Future competition focuses on high-purity modification and integration with cutting-edge fields such as lithium batteries and carbon quantum dots.

The global Distilled Tall Oil (DTO) market size was estimated at USD 947.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
