Report Overview

Buoyancy is an upward thrust exerted by fluid opposing the weight of the immersed object. This upward thrust is equal to the weight of the water displaced by the immersed object. Buoyancy products are objects fabricated to apply these solutions. Distributed buoyancy modules are clamped to umbilical, risers, or pipelines to hold them in specific geometric configurations with an aim to prevent overutilization of the system. The modules are attached to the equipment through clamps, which makes them easy and quick to install. They are widely used in SURF application in offshore oil & gas production and offshore wind farm cables.

The global Distributed Buoyancy Module market size was estimated at USD 2336 million in 2023 and is projected to reach USD 4478.67 million by 2032, exhibiting a CAGR of 7.50% during the forecast period.

North America Distributed Buoyancy Module market size was estimated at USD 689.47 million in 2023, at a CAGR of 6.43% during the forecast period of 2024 through 2032.
