## Abstracts

The distributed fiber optic sensing monitoring system is an efficient monitoring solution based on fiber optic technology, which uses fiber optic sensors to monitor environmental changes in real time and continuously. Unlike traditional point sensors, the distributed fiber optic sensing system can achieve long-distance, multi-point monitoring on the entire optical fiber, usually through the light scattering effect in the optical fiber to sense changes in physical quantities such as temperature, strain, pressure, vibration, etc. This technology can provide high-sensitivity and high-precision monitoring, and is suitable for various complex environments and long-distance application scenarios.

The global Distributed Fiber Optic Sensor Monitoring System market size was estimated at USD 2241.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.60% during the forecast period.
