The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Distributed Optical Fibre Sensing System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Distributed Optical Fibre Sensing (DOFS) system is a technology that transforms standard optical fibres into continuous, long-range sensors capable of monitoring parameters like temperature, strain, vibration, or acoustic signals along the entire length of the fibre. Using light scattering effects (such as Rayleigh, Brillouin, or Raman scattering), the system provides spatially resolved data over distances of meters to tens of kilometers, allowing for real-time detection and location of events such as leaks, structural stress, or intrusions. DOFS systems are widely used in industries like oil and gas, power, transportation, and security for asset monitoring and protection.

The global Distributed Optical Fibre Sensing System market size was estimated at USD 1125.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
