Report Overview

Distributed Photovoltaic Generation is an approach to provide solar energy resources by deploying tools and technologies in proximity to the end users of the power. The system for power generation can be installed on rooftops of houses and commercial buildings that will use the energy. This method is in contrast with centralized generation where solar electricity is produced by a large plant and then distributed to consumers through the power grid. Also, the surplus energy produced by individual owners (through solar) can be sold to the power companies.

The global Distributed Photovoltaic Power Plant market size was estimated at USD 139800 million in 2023 and is projected to reach USD 254862.84 million by 2032, exhibiting a CAGR of 6.90% during the forecast period.

North America Distributed Photovoltaic Power Plant market size was estimated at USD 40864.20 million in 2023, at a CAGR of 5.91% during the forecast period of 2024 through 2032.
