Abstracts

Distributed photovoltaic (PV) generation refers to the production of electricity from solar energy using photovoltaic panels installed at or near the point of consumption, typically on residential, commercial, or industrial rooftops, as well as on ground-mounted systems within localized distribution networks; unlike centralized solar farms that feed power into high-voltage transmission grids, distributed PV systems are characterized by smaller-scale installations that reduce transmission losses, enhance grid resilience, and empower end-users to generate their own electricity, often with the capability to export surplus energy back to the grid under net metering or feed-in tariff arrangements.

The global Distributed Pv Generation market size was estimated at USD 48.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
