Abstracts

Distributed servo drives represent a specialized category of industrial automation components that integrate drive electronics, control logic, and communication interfaces directly into individual servo motors, eliminating the need for centralized drive cabinets and reducing wiring complexity. These devices are designed for decentralized operation within networked systems, often leveraging real-time industrial Ethernet protocols such as EtherCAT, PROFINET, or POWERLINK to enable precise, synchronized motion control across multiple axes. By embedding intelligence at the point of actuation, distributed servo drives enhance system flexibility, scalability, and diagnostics while optimizing space and installation time in applications ranging from robotics and packaging machinery to semiconductor manufacturing and automated assembly lines.

The global Distributed Servo Drives market size was estimated at USD 1500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
