Report Overview

Distributed solar photovoltaic system is an approach to provide solar energy resources by deploying tools and technologies in proximity to the end users of the power. The system can be installed on rooftops of houses and commercial buildings that will use the energy. This method is in contrast with centralized generation where solar electricity is produced by a large plant and then distributed to consumers through the power grid. Also, the surplus energy produced by individual owners (through solar) can be sold to the power companies.

The global Distributed Solar Photovoltaic System market size was estimated at USD 174.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Distributed Solar Photovoltaic System market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
