## Abstracts

Distribution terminal unit is an intelligent equipment used in power distribution automation system, mainly used to realize the monitoring and control of distribution network. DTU collects data from field devices and transmits it to the control center, and also receives commands from the control center to operate field devices. Market Concentration and Key Players: Internationally, the market concentration degree of the distribution terminal unit is high, only Eaton and Hitachi Energy produce the product. Domestically, the market concentration degree is not high, and some domestic leading electric power enterprises have production, such as Xuji Electric, Intelligent Technology of University of Science and Technology, Shanghai Siyuan Electric, Changyuan Shenrui, etc. Manufacturing Processes and Market Trends: As a key component of smart grid, the manufacturing process of distribution terminal unit is developing towards highly integrated, modular and intelligent. Modern DTU adopts advanced electronic technology and communication protocol to ensure high precision data acquisition and processing capabilities, and support remote monitoring and control functions. Material selection is emphasized in the manufacturing process to improve the durability and reliability of the equipment, and rigorous testing procedures are used to ensure stable operation of the product. As IoT technology advances, DTUs are designed to be more interoperable with other smart devices, enabling more efficient energy management. In terms of market trends, the demand for DTUs continues to rise as global investment in smart grids increases and the demand for renewable energy integration grows. Especially in emerging economies, the use of DTUs is expanding rapidly in order to improve the reliability and efficiency of power supply. In addition, increased environmental awareness has prompted manufacturers to develop more energy-efficient and environmentally friendly products. In the future, it is expected that DTU will continue to evolve towards digitalization, automation and intelligence, contributing to the construction of more flexible and reliable power systems.

The global Distribution Terminal Unit (DTU) market size was estimated at USD 800.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
