Report Overview

Some shower diverters contain a cartridge. Diverters with cartridges are sometimes part of a triple-handle shower and tub assembly or part of the single-handle shower and tub-faucet assembly. In the triple-handle assembly, the diverter sits between a hot and cold faucet handle. In this arrangement, turning the diverter's handle causes its cartridge to open or close a supply line that diverts water between the spout and showerhead. Single-handle assemblies contain complex ball or disc cartridges that allow one handle to simultaneously divert water, control flow and regulate temperature.
