Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Divided Motor Core competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The divided motor core is a core component of a motor designed by dividing the traditional integral laminated core into multiple independent modular units (such as the block mover core), which aims to reduce eddy current loss and improve electromagnetic conversion efficiency. It is widely used in new energy vehicle drive motors, high-precision industrial equipment and special motors. It is estimated that the block motor core as a sub-segment will account for about 5%-8% of the overall motor core market (globally US\$16.49 billion in 2024), corresponding to a market size of approximately US\$820 million to US\$1.32 billion. Its growth is mainly driven by the demand for lightweight new energy vehicles (CAGR 18.2% from 2025 to 2030), the upgrade of high-precision drives in industrial automation, and the iteration of bonding/riveting technology (such as ultra-thin laminated bonded cores to reduce losses). In the future, it is expected to be further expanded in emerging fields such as quantum computing cooling systems and superconducting magnets.

The global Divided Motor Core market size was estimated at USD 934.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Divided Motor Core market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
