Report Overview

Divinylbenzene (DVB) is a highly reactive chemical compound primarily used as a crosslinking agent in the production of polymers, resins, and ion-exchange materials. It consists of two vinyl groups attached to a benzene ring, which enables it to form strong, stable polymer networks when copolymerized with styrene or other monomers. DVB is available in various purity grades, with higher-purity variants (80-85%) being essential for specialized applications like chromatography resins and high-performance plastics, while lower-purity grades (50-55%) are used in general-purpose ion-exchange resins and rubber modifications. Its thermal stability, chemical resistance, and structural reinforcement properties make it indispensable in industries such as water treatment, automotive, coatings, and electronics. The demand for DVB is closely tied to advancements in polymer science, environmental regulations, and the growth of end-use sectors like pharmaceuticals and energy storage.

The global Divinylbenzene(DVB) market size was estimated at USD 80.14 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.07% during the forecast period.
