## Abstracts

DLC film deposition equipment is a special equipment that uses physical vapor deposition (PVD) technology to generate DLC film on the surface of the substrate. DLC film has a wide range of applications in machinery, electronics and medical fields due to its excellent properties such as diamond-like hardness, low friction coefficient, high wear resistance and chemical stability. DLC film deposition equipment can be divided into many types according to specific deposition processes and technical characteristics, such as electron beam evaporation coating equipment, ion beam deposition equipment, magnetron sputtering equipment, etc. These devices play an important role in the preparation process of DLC films and provide strong support for the wide application of DLC films. The ICP-PECVD coating equipment market is currently showing a steady growth trend. This is mainly due to the continuous development of the semiconductor industry and the increasing demand. With the rise of emerging technologies such as mobile communications, the Internet of Things and artificial intelligence, the demand for high-performance semiconductor devices has continued to increase, further promoting the development of the ICP-PECVD coating equipment market. In addition, technological progress and innovation are important factors driving the growth of the ICP-PECVD coating equipment market. ICP-PECVD technology can provide high-quality thin film coatings, providing important support for the manufacture of semiconductor devices. In summary, the ICP-PECVD coating equipment market is showing a steady growth trend.

The global DLC Thin Film Deposition Equipment market size was estimated at USD 363.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
