## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on DMS System for Vehicle competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An DMS System for Vehicle is an in-vehicle safety system that uses an inward-facing infrared/visible-light camera, sensors and embedded AI algorithms to continuously track the driver's face, eye gaze, eyelid movements, head pose and other behavioral/physiological cues. The system assesses the driver's attention, drowsiness, distraction and potential health-related incapacitation in real time. When unsafe states are detected, it issues visual, audible or haptic alerts and, in many implementations, interacts with ADAS/automated driving functions (e.g., braking, speed limitation, lane keeping) to prevent or mitigate crashes. DMS is becoming a key element of modern active safety and regulation-driven safety requirements in passenger cars and commercial vehicles. In 2024, global DMS System for Vehicle production reached approximately 11767 k units, with an average global market price of around US\$ 99.04 per unit. Global production capacity in 2024 is approximately 15000 k units. Upstream of automotive DMS mainly covers camera modules, IR illumination and optics, automotive-grade SoCs/ECUs, AI-based perception software and basic mechanical/electrical components. Key global suppliers include leading image-sensor and camera vendors (Sony, onsemi, OmniVision), IR/VCSEL providers (e.g., ams OSRAM), semiconductor platforms for ADAS/cockpit (Qualcomm, NVIDIA, Mobileye, NXP, Renesas) and specialist DMS software/system companies such as Seeing Machines, Smart Eye, Valeo and Cippa. Downstream, DMS is mainly adopted in passenger cars, commercial vehicles and fleet/aftermarket solutions, often bundled with ADAS and interior sensing. Core customers are global and Chinese OEMs, commercial-vehicle makers, large fleet operators and Tier-1 suppliers that integrate DMS into cockpit or ADAS domains. The

global DMS System for Vehicle market is in a strong growth phase. Growth is mainly driven by: (1) regulatory push, particularly in Europe and China, where new safety regulations and NCAP protocols mandate drowsiness and distraction monitoring; (2) increasing awareness of accidents caused by fatigue and distraction, leading OEMs and fleets to view DMS as a key differentiating safety feature; and (3) the rising penetration of ADAS and automated driving, which requires robust driver state monitoring for safe human-machine interaction. Leading software vendors like Smart Eye and Seeing Machines have secured large numbers of design wins across major OEMs, while Tier-1s such as Valeo and Magna integrate DMS into broader cockpit and ADAS platforms, accelerating series production rollout worldwide.

The global DMS System for Vehicle market size was estimated at USD 1165.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 27.10% during the forecast period.
