## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on DMSO-free Cell Cryopreservation Medium competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. DMSO-free cell cryopreservation medium is a specialized solution for preserving cells and tissues without using dimethyl sulfoxide (DMSO), which is a common but toxic cryoprotectant. These alternative media use other ingredients to protect cells from ice crystal damage, offering a safer option for preserving cell viability and function, especially for sensitive cell types like stem cells. In 2024, global production of DMSO-free Cell Cryopreservation Medium reached 12.81 kiloliters, with an average selling price of \$5.70 per milliliter. This product typically has a single-line production capacity of approximately 200-400 liters per year, with an industry gross profit margin of approximately 35%-55%. Raw materials account for the largest portion of the cost structure (60%), followed by R&D and quality control. The upstream suppliers of this product are pharmaceutical-grade raw materials and packaging materials, as well as reagent manufacturers. The downstream suppliers are cell therapy CDMOs, hospitals/cell therapy centers, and life science research institutions.

The global DMSO-free Cell Cryopreservation Medium market size was estimated at USD 73.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
