### Report Overview

DNA library preparation kit is collectively set of improved reagents which are used to convert the small amount of DNA into indexed libraries. DNA library kits are used in next-generation sequencing for conversion of small amount of DNA. DNA library preparation kits are developed on the basis of Tn5 Transposase. DNA library preparation kits help during the complex process of DNA fragmentation and also for adaptor connection into a one-step enzymatic reaction. Therefore, these kits have significant demand for library construction owing to its capability to shorten the DNA fragmentation process. DNA library preparation kits provide flexibility to focus on other research priorities due to its ability perform the DNA fragmentation and addition of tag simultaneously.
