The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on DNA Polymerases for PCR competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. DNA Polymerases for PCR are a group of enzymes required for DNA synthesis. Arthur Kornberg purified and characterized DNA polymerase from E.coli for the first time. It is a single-chain polypeptide now known as DNA polymerase-I. Scientists have now found five DNA polymerases in E. coli. The main function of DNA polymerases is to duplicate the DNA content of a cell during cell division. They do so by adding nucleotides at 3'-OH group of the growing DNA strand.

The global DNA Polymerases for PCR market size was estimated at USD 1203.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
