### Report Overview

Magnetic beads are made up of tiny (20 to 30 nm) particles of iron oxides, such as magnetite ( $\text{Fe}_3\text{O}_4$ ), which give them superparamagnetic properties. Superparamagnetic beads are different to more common ferromagnets in that they exhibit magnetic behavior only in the presence of an external magnetic field. This property is dependent on the small size of the particles in the beads, and enables the beads to be separated in suspension, along with anything they are bound to.
