Report Overview:

Restriction Endonuclease is an enzyme that cuts DNA at or near specific recognition nucleotide sequences known as restriction sites. They are the enzymes that are found in the bacteria and are harvested from them for their use in research and commercial aspects. Restriction enzymes are commonly classified into four types, which differ in their structure and whether they cut their DNA substrate at their recognition site, or if the recognition and cleavage sites are separate from one another.

The Global DNA Restriction Endonuclease Market Size was estimated at USD 1726.68 million in 2023 and is projected to reach USD 2435.50 million by 2029, exhibiting a CAGR of 5.90% during the forecast period.
