## Abstracts

DNS-over-HTTPS (DoH) is a security protocol that encrypts Domain Name System (DNS) queries using the HTTPS protocol. Traditional DNS requests are sent in plaintext, making them vulnerable to interception, tracking, or manipulation by third parties such as ISPs, hackers, or surveillance agencies. DoH enhances privacy and security by wrapping DNS queries within standard HTTPS traffic, making it harder for unauthorized entities to monitor or alter DNS communications.

The global DNS-over-HTTPS (DoH) market size was estimated at USD 653.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.60% during the forecast period.
