Abstracts

DNS (domain name system) security software is used to secure DNS servers and the websites they support. These tools redirect end user web traffic through filters capable of identifying malware signatures and other characteristics of potentially dangerous websites and media. Global key players of DNS Security Software include Cisco, Akamai, Bluecat, Neustar and OpenText (Webroot), etc. Top three players occupy for a share about 33%. North America is the largest market, with a share about 66%, followed by Europe and Asia Pacific. In terms of product, Outbound DNS is the largest segment, with a share over 76%. In terms of application, Large Enterprises is the largest market, with a share over 65%. Market Drivers: 1. Applied more sophisticated intelligence Standard DNS security tools use generic policies or threat feeds to apply policies. These provide basic-level protections but often can't anticipate more sophisticated threat types. Some DNS security software was built to identify more complex forms of malicious DNS activity such as DNS tunneling and domain generation algorithms. Using these smarter higher-level policies gives security teams the power to identify and block forms of malicious activity which standard DNS security products usually miss. 2. Sit on the 'first hop' This allows some DNS security software to apply security policies to all traffic, blocking not only malicious queries which are trying to connect with command and control servers on the outside internet, but also malware which is probing within the network in an attempt to discover sensitive information. As well, this assists with a significantly faster response time.

The global DNS Security Software market size was estimated at USD 1285.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.00% during the forecast period.
