Abstracts

Document cleaning powder refers to a specialized dry cleaning compound designed for the safe removal of surface dirt, dust, stains, and contaminants from paper-based materials, archival documents, books, and other delicate substrates without the use of liquids or solvents that could cause ink bleeding, paper distortion, or chemical degradation. Typically composed of finely ground, pH-neutral, and chemically inert materials such as vulcanized rubber crumbs, eraser particles, or specialized absorbent polymers, these powders function through gentle mechanical action—either by brushing, sifting, or vacuuming—to lift and encapsulate particulate matter while preserving the integrity of fragile media.

The global Document Cleaning Powder market size was estimated at USD 18.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
