A document reader is a device or system designed to read and recognize information from various types of documents. It works by scanning, photographing, or reading information carriers such as barcodes, QR codes, and smart chips on the document, extracting key data, and converting it into electronic, editable digital information. Document readers typically integrate image processing, optical character recognition (OCR) technology, and barcode/QR code scanning capabilities to accurately identify text, images, and encoded information on the document. They also feature data verification functions to ensure the accuracy and validity of the extracted information, performing checks on formats like ID numbers, expiration dates, etc. Document readers are widely used for fast recognition and information capture from documents like ID cards, passports, driver's licenses, health cards, and bank cards.
