## Abstracts

The molecular structure of dodecafluoropentyl sulfonic acid resin contains a special fluorocarbon segment of dodecafluoropentyl and a sulfonic acid group. The fluorocarbon segment gives the resin excellent hydrophobicity, corrosion resistance and high temperature stability, while the sulfonic acid group gives it good ion exchange performance and acidic properties. Due to the presence of the fluorocarbon segment, dodecafluoropentyl sulfonic acid resin exhibits good corrosion resistance to a variety of chemical media, including strong acids, strong bases, organic solvents, etc. Dodecafluoropentyl sulfonic acid resin can maintain stable performance under high temperature conditions and is not easy to decompose or deteriorate. The special chemical structure of dodecafluoropentyl sulfonic acid resin makes it difficult to adsorb pollutants on its surface, thus having excellent anti-pollution properties. The presence of the sulfonic acid group gives the resin ion exchange ability, which can be used in ion exchange membranes, ion exchange resins and other fields.

The global Dodecafluoropentyl Sulfonic Acid Resin market size was estimated at USD 139.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
