Report Overview

Dodecylbenzene (DDB) is a key organic compound primarily used as an intermediate in the production of linear alkylbenzene sulfonate (LAS), a widely utilized surfactant in detergents, cleaning agents, and industrial applications. Chemically, it consists of a benzene ring attached to a dodecyl (12-carbon) alkyl chain, which can be either linear (LAB) or branched (BAB), with the linear variant being more environmentally friendly and thus increasingly preferred in modern formulations. Its properties, such as hydrophobic and hydrophilic balance, make it an essential raw material for manufacturing high-performance anionic surfactants, which are critical in household, personal care, and industrial cleaning products. The demand for DDB is closely tied to the growth of the global detergent industry, regulatory shifts favoring biodegradable surfactants, and emerging applications in enhanced oil recovery and agrochemical formulations. Market dynamics are influenced by raw material availability (e.g., benzene and kerosene derivatives), regional production capacities, and environmental regulations pushing for sustainable alternatives to branched alkylbenzene sulfonates.

The global Dodecylbenzene market size was estimated at USD 500.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
