Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dolby Atmos Sound Bars competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of Dolby Atmos Sound Bars reached approximately 15 million units, with an average market price of about USD 331. Dolby Atmos Sound Bars are audio devices integrated with Dolby Atmos technology, designed to deliver an immersive three-dimensional audio experience. Unlike traditional 2.1 or 5.1-channel systems, Dolby Atmos adds height information to the sound scene, simulating sounds coming from above or around, creating a more realistic spatial perception. This technology is typically achieved through upward-firing speakers or reflective channels. Additionally, many Dolby Atmos soundbars support wireless connectivity, voice control, and smart home integration, enhancing user experience. In the supply chain, the upstream of Dolby Atmos soundbars primarily includes audio decoding chip manufacturers, speaker unit suppliers, and wireless communication module providers; the midstream consists of audio equipment manufacturers such as Samsung, Sony, and Bose; and the downstream includes retailers, e-commerce platforms, and end consumers. These brands often establish long-term partnerships with chip and speaker suppliers to ensure product sound quality and performance. Simultaneously, with the growth of the smart home market, audio equipment manufacturers are also collaborating with smart home platforms to promote product interconnectivity.

The global Dolby Atmos Sound Bars market size was estimated at USD 4965.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
