Abstracts

A DCA bot is automated trading software designed for investors interested in using a dollar-cost averaging (DCA) strategy to buy cryptocurrencies. Here's how it works: instead of trying to time the market, you set it to purchase (or sell) a fixed amount of crypto regularly, no matter the current price. This smooths out the average cost of your assets over time, lessening the impact of short-term price swings. These bots keep an eye on the market for you, executing trades based on your preferences. You can customize them to buy and sell cryptocurrencies at specific intervals or in response to price changes. You can also use technical analysis and smart features to pinpoint optimal buying and selling times. Moreover, many DCA crypto trading bots come with money management tools. These help you protect your strategy by setting stop-losses, take-profits, and other risk management features.

The global Dollar Cost Averaging (DCA) Bot market size was estimated at USD 83.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
