Abstracts

Door Intercoms which is also named as the door-phone or door entry devices and equipment, is a stand-alone intercom system used to manage calls made at the entrance to a building with access controlled by audiovisual communication between the inside and outside. The main feature of door entry is that it enables the person indoors to identify the visitor and, if (and only if) they wish, engage in conversation and/or open the door to allow access to the person calling. The door intercom market has experienced significant growth over the past few years, driven by increasing security concerns, technological advancements, and the rising demand for smart home solutions. A door intercom or doorbell phone is a vital communication device that allows two-way communication between residents and visitors, enhancing the security and convenience of homes, offices, and buildings. The market is mainly segmented into two product types: audio intercoms and video intercoms. The door intercom market primarily consists of two types of devices: audio intercoms and video intercoms. Audio intercoms are the traditional models, offering voice communication between the visitor at the door and the resident inside. These systems are relatively simpler and more affordable, making them popular in regions or settings where visual communication is not a critical requirement. On the other hand, video intercoms have gained significant market share, becoming the leading product in the door intercom market. These devices provide not only audio communication but also video feeds, allowing users to visually identify visitors before granting access. Video intercoms offer enhanced security, particularly in residential settings, where the ability to verify visitors visually is crucial. The widespread adoption of smart home technology has also contributed to the growth of video intercoms, as they can be integrated with other smart home devices, such as cameras, motion detectors, and mobile apps, providing a more comprehensive security solution.

The global Door Intercoms market size was estimated at USD 2510.0 million in 2025

and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
