Report Overview

Door Magnetic Sensor is used to detect whether doors, windows, drawers, etc. are opened or moved illegally. It consists of wireless transmitter and magnetic block. The magnetic control strip of the Door Magnetic Sensor has a permanent magnet inside, which is used to produce a constant magnetic field. When the permanent magnet and the reed are close, the door magnetic sensor is in the waiting state; when the permanent magnet is away from the reed tube for a certain distance, the Door Magnetic Sensor is in the normally open state. When the door is closed, the magnetic control bar and the door magnet body are close, and the reed and permanent magnet are also close. At this time, the reed tube is absorbed and the door magnetic sensor is in the waiting state.
