Abstracts

Door and window alarm is an easy to install safety door device, which will give a loud alarm when triggered. A door and window alarm is a device used for security purposes, usually in places such as homes, businesses, or offices. It mainly detects potential intrusions by monitoring the opening and closing status of doors and windows, and triggers alarms to alert users or draw attention when abnormal conditions occur. Door and window alarms usually consist of two parts: a magnetic sensor and an alarm device. The magnetic sensor includes a magnet installed on the door and window frame and a magnetic sensor installed on the door and window. When the door or window is closed, the magnet and sensor are close to each other, and the sensor detects the closed state. Once the door or window is opened or forcibly broken, the connection between the magnet and the sensor will be interrupted, and the sensor will send a signal to the alarm device, triggering the alarm sound or flashing warning light.

The global Door and Window Alarms market size was estimated at USD 235.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
