Abstracts

A Doppler Radar Gun is a device that uses the Doppler effect to measure the speed of a moving object. It emits a radio - frequency (RF) signal towards the target object. When the signal hits the moving object, the frequency of the reflected signal changes due to the object's motion. By detecting and analyzing this frequency shift, the Doppler Radar Gun can calculate the velocity of the object relative to the gun. These devices are often used in sports to measure the speed of a ball (such as in baseball or tennis) or the speed of a moving vehicle for traffic enforcement.

The global Doppler Radar Gun market size was estimated at USD 726.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
