Abstracts

A dosing system for ponds is an automated or semi-automated device designed to accurately dispense specific quantities of liquid or powdered substances?such as water conditioners, fertilizers, algacides, pH adjusters, or beneficial bacteria?into pond water at predetermined intervals. These systems are essential for maintaining water quality, supporting aquatic life, and promoting ecological balance in both ornamental and functional ponds, ranging from small backyard water features to larger commercial or recreational bodies of water. By ensuring precise and consistent application, dosing systems reduce human error, save time, and help prevent overdosing or underdosing, which can lead to imbalances harmful to fish, plants, and overall pond health.
