Abstracts

A double beam bridge crane is an industrial overhead lifting system characterized by two parallel girders mounted on end trucks that traverse along elevated runways, enabling three-dimensional movement for heavy load handling across large work areas. This design provides superior structural integrity and load distribution compared to single-beam configurations, making it suitable for demanding applications requiring high lifting capacities (typically 10 to 550 tons), extended spans, and precise positioning in environments such as manufacturing plants, steel mills, shipyards, and logistics hubs. The system integrates a hoist and trolley mechanism that moves along the bridge girders, offering optimized stability, reduced deflection, and enhanced safety for repetitive heavy-duty material handling operations.

The global Double Beam Bridge Crane market size was estimated at USD 1450.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
