Report Overview

The double-clad fiber laser colleague has an inner cladding and an outer cladding fiber structure, and the low refractive index outer cladding layer forms a multimode optical waveguide layer between the two cladding layers. The refractive index of the inner cladding layer is smaller than that due to the refractive index of the inner cladding layer. The refractive index of the core makes it easier to pump high-power multimode semiconductor lasers into the fiber and is confined to the inner cladding for transmission, which is beneficial for maintaining high power density optical pumps.
