Report Overview

The double-cylinder pneumatic punch press is a pneumatic press that uses compressed air as the power source. It has two air pressure chambers, one for deflation and one for inflation. The output force is the sum of forward and reverse pressures. This type of punch press uses air pressure to push the piston and piston rod outward or pull back inward to complete various stamping actions. In punch processing, it can use gas power to complete up and down movement, bending, stretching, punching and shearing, etc. It is suitable for occasions that require high precision and high efficiency stamping processing.
